

- Create secure ID badges
- Track time and attendance
- Quickly view who is present on the job site
- Account for all personnel during an emergency
- Grant access only to authorized contractors and visitors

Know who is on your job site.

ConstructionGate

Mobile Identity and Tracking Solution

ConstructionGate - is a powerful, efficient, mobile identity management tool that addresses your identification, tracking and verification needs. ConstructionGate ensures that those who access the job site have the authority to do so.

Simply by scanning badges the system will verify authorization. Details of each check-in and check-out are logged. Create detailed charts and reports for each card holder group.

Track total hours worked. Also track supplies or equipment issued for better resource management.

Permit or deny entry based upon user defined values, database information, or free-form query statement.

ConstructionGate assists with emergency rescue efforts by providing evacuation reports to account for all personnel present at the construction site.

ConstructionGate is an ideal solution for construction companies, as it is completely portable - simple to move from one job site to the next.

Security at worksite is critical. Optional handheld devices add security at every access point.
