

- Quickly enroll patients on-site
- Provide a dynamic medical questionnaire
- Dispense medication and supplies
- Run reports on all activity and data collected

Track resources and medication from the warehouse to the Point of Distribution!

The Perfect Tool for Health Departments

EntryPoint Clinic Manager

Designed to work with EntryPoint Emergency Event Manager

EntryPoint Emergency Event Manager is a powerful software solution that allows you to efficiently manage patients at public health events. Designed to work with EntryPoint Emergency Event Manager and Asset Manager solutions.

Enroll

Quickly enroll patients on-site by swiping their government issued ID, such as Driver's License or State ID card, to quickly populate required fields. Capture patient photograph to assist in the prevention of fraudulent activity such as double-dipping. If no identification available, manually enter patient information. Includes the ability to group family members together to reduce lengthy lines and associate minors with parental guardians.

Screen

Complete a dynamic medical questionnaire to acquire the necessary patient medical background information prior to dispensing medication or providing other preventative care. Provide patient with a Face Sheet, wristband, or credential that incorporates barcode technology so patient can be tracked at each successive station through completion.

Dispense

Dispense medication and issue supplies. Reduce long lines by dispensing all supplies for one family unit to one individual person. Tied in with our Asset Manager solution you can easily see medication specifications such as dose, beginning totals and totals left on hand. Allows you to easily see what supplies you are running low on.

Report

The robust reporting capability of the solution allows you to report on a variety of things including total patient throughput time taken, to how many patients your team processed. Functionality that is necessary for federal reimbursement!

Identify and Protect with Secure ID Solutions
