

- Quickly provide positive ID on-site for all volunteers, rescue crews and first responders
- Identify and track assets or skilled professionals
- Accurate reporting for federal reimbursement
- Grant access only to authorized individuals

Secure your incident scene with

***Mobile Event
Manager Solution***

EntryPoint Emergency Event Manager

EntryPoint Emergency Event Manager is a powerful, efficient, mobile management tool that addresses your identification, tracking, and verification of personnel at emergency scenes quickly and securely. It provides emergency responders with improved security, greater risk management and more accountability during an event.

Identify

Provide secure photo IDs on-site for every emergency worker and volunteer. Easily capture data from a driver's license or state issued ID to speed up enrollment, plus attach certifications and other pertinent documents. Issued plastic card credential can contain barcode or any technology of your choice that can be easily scanned at each critical entry point.

Track

Completely mobile, you can easily transport the system from event to event to identify and track emergency workers, volunteers, and rescue crews as well as individual time spent on-site. Reporting is a snap, allowing you to view and export accurate data that can be provided to accounting. Search for attainable assets such as generators, boats or skilled professionals and assign a specific piece of equipment to a specific responder and/or team, easily identifying the responsible individual(s) if not returned after the event.

Manage

EntryPoint Emergency Event Manager allows you to manage personnel contact information, skills and certifications so you always know who you have currently available or what is attainable. Web access gives you the ability to view and access information remotely, allowing you to keep an "eye" on what is taking place at your event.
