

ConstructionGate

Mobile Wireless Access Control System

- Grant access only to authorized employees and visitors
- Quickly view who is present or absent on the job site
- Track time and attendance
- Account for all personnel during an emergency

Do you know who is on your job site?

Mobile Wireless Access Control System

ConstructionGate - utilizing SuperCom's patented DynaGate system and SmartCard ID cards - provides wireless security at every access point of the construction site. The use of Contractor/Employee ID cards, to store pertinent information and authorization levels for each employee/contractor, will ensure that those who access the job site have the authority to do so. Security at the work site is critical and ConstructionGate will not grant access to personnel or visitors without authorization.

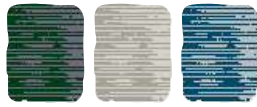

ConstructionGate monitors and reports an employee/contractor presence or absence at the job site. Standard reports will display the number of personnel on location, who is late or absent, number of hours worked or how many supervisors are present. The system also has a powerful report generator to create any custom reports that may be required for compliance issues. When ConstructionGate is set up on a wireless network this data can be transmitted for up to two miles. The system can also be configured with a modem that allows the construction company to request information - for time and attendance/payroll applications, compliance issues, etc. - from the work site, on a time schedule or on demand.

ConstructionGate can assist with rescue efforts by providing reports to account for all personnel.

ConstructionGate is ideal for construction companies because it is completely mobile and wireless making it easy to move from one job site to the next.

DynaGate
Personal Access Total Control

Features

- Mobile, wireless access control system
- Biometrics available for positive identification
- Real-time reporting
- Generates custom or standard reports
- Works on-line or off-line
- Easily moves from one job site to the next
- Transmits data for up to two miles on a wireless network
- Optional modem can dial main office to transmit recorded data
- SmartCard security

Applications

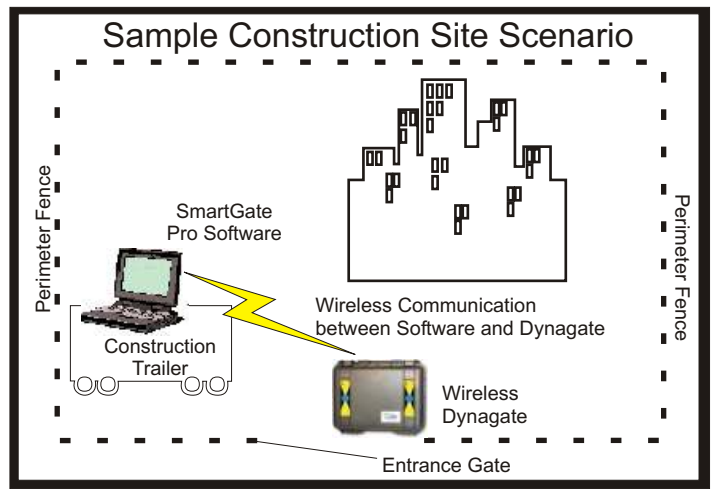

- Perimeter management
- Employee/Contractor/Visitor access control
- Time and Attendance for payroll application
- Emergency mustering - presence/absence reporting
- Truck Delivery access control

Components

- DynaGate - Wireless (Modem optional)
- SmartGate Pro Software
- SC-Server
- Smart Cards
- Keyboard Wedge (optional)
- Biometric Reader (optional)
- Print-X fingerprint Scanner (optional)

Technical Specifications

- One of Two (option) contactless smart card readers
- Optional Biometric verifier
- Large storage capacity 512K of protected RAM
- RS-232, RS-485, TCP/IP communication
- Wireless - no connections necessary
- Up to 6 hours continuous work without charge
- Internal modem (option)
