

Extend Smart Card Security Outside Your Facility
Ideal for remote areas & off-site events
Simple to use, self contained unit

Dynamic Access Control

DynaGate

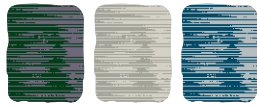

Mobile Wireless Access Control System

A portable data collection device, providing unprecedented flexibility, allows Smart Card data collection away from hardstand facilities. This mobile, wireless access control system is designed for temporary use where quick installation and immediate operation are critical. Setup and dismantle are just as fast for easy reuse. Especially functional for vehicles, remote areas, temporary gates and events where control of personnel, students or attendees is necessary. DynaGate enables a set of features that provide complete mobility and enhanced security at every access point by allowing security personnel to check, record and automatically report personnel entry or exit utilizing a specially designed, completely mobile setup containing all required components. May be set to grant or deny access based on security authorization level.

This proprietary feature enables mobility from one entry point to another and at various events, while using the same hardware. Once an activity is logged, it is transferred to the main management system that can automatically send out an e-mail or SMS message to report an absence or abnormal event. This wireless remote agent data collection unit works independently on its battery with no connections necessary. At the main office, or at a security gate, DynaGate loads updated data and charges its battery. Whether at the entry gate, construction site, or at off-site events, DynaGate is used to collect attendance information while personnel enter the off-site premises.

DynaGate
Personal Access Total Control

Features

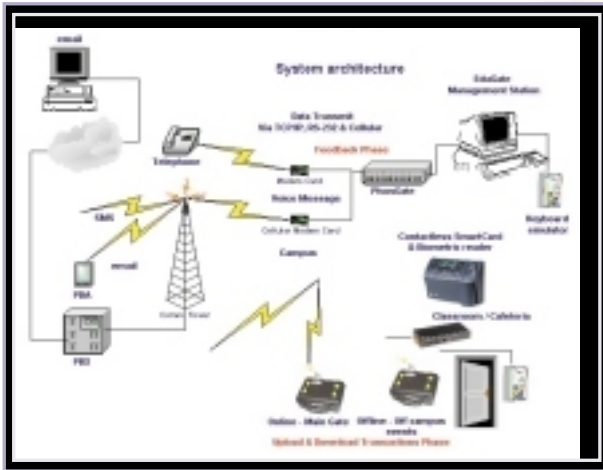

- Mobile, wireless access control system
- Real Time Reporting
- Standard and Customized Reports
- Quick Installation and Implementation
- Can work on-line or off-line
- Dismantles easily

Applications

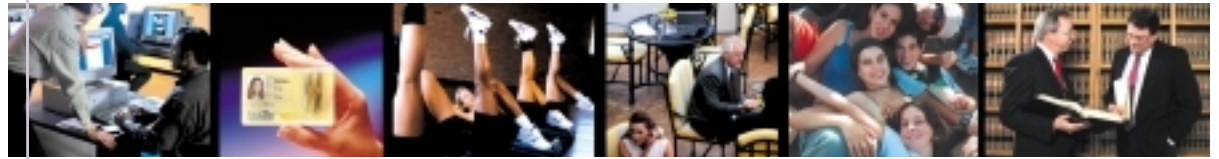

- Employee/Member Access Control
- Truck Delivery Access Control
- Time and Attendance
- Emergency Mustering - Presence/Absence Reporting

Technical Specifications

- One of Two (option) contactless smart card readers
- Optional Biometric verifier
- Large storage capacity 512K of protected RAM
- RS-232, RS-485, TCP/IP communication
- Wireless - no connections necessary
- Up to 6 hours continuous work without charge
- Internal modem (option)
