

Lobby Track

Innovative Visitor Management Software

Lobby Track is a new secure tracking, access control, and visitor management software system. This innovative new technology allows organizations to track employees and equipment with detailed activity logs by individual or groups, provides access control in conjunction with

entry systems and provides visitor management functionality, including data entry, badge design, and badge printing. Unique to this system is the capability to directly interface with the customers existing database in real-time.

Multiple Live Database Connections

- Maintain live connections to multiple databases in real-time
- Connect to and toggle between visitor, employee, membership, contractor or any other database
- One-click connections to popular databases and support for connecting to any ODBC / OLE DB compliant database
- No need to re-enter or import existing data making setup quick and easy
- Use pre-designed data entry forms or create your own using drag and drop tools
- Customize the way data is presented to the user to fit usability and security requirements
- Get started quickly with the pre-configured database or create a new database using a simple setup wizard
- Lobby Track easily integrates into new or existing environments

The Lobby Track Advantage

Verification

Images and other visitor information is displayed at check-in. Photo IDs can be scanned and automatically added to the database. Visitors can be verified, logged and badges printed quickly and reliably.

Alerts and Messages

Alerts and messages can be set to appear at the time of check-in. Instructions are provided to the attendant regarding the course of action to be taken, should an alert occur. Watch lists can be created and historical data is easily accessed. Messages can be passed along at the time of entry.

Access Control

Date, time and location are checked against access rules. The check-in process can be set to auto mode for kiosks or manual for secure locations.

Time and Attendance

Details of each check-in and check-out are logged. Logs can be printed or exported and are easily accessible by other internal systems such as the payroll system.

Visitor and Equipment Tracking

Track both visitors and equipment entering and exiting a facility. Equipment tags can be custom designed and quickly produced. Return events are automatically scheduled during check-out. Notifications occur if equipment is not returned by the scheduled time.

Professional Card and Badge Design

Design professional photo ID cards and visitor badges using an integrated version of Jolly Technologies card design suite, ID Flow.
